

MAH Supervised Study Task 2

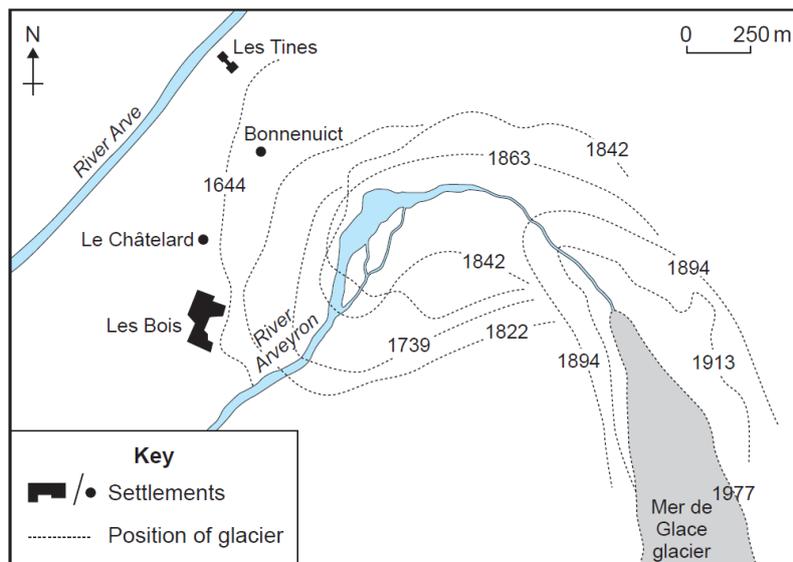

Study the map below which shows the changing position of the ice front of the Mer de Glace glacier, near Chamonix, France between 1644 and 1977.

1. Referring to the map, describe the changing position of the Mer de Glace glacier from 1644 to 1977. [5]
2. How can the concepts of the glacier as a system and the glacial budget/mass balance help to explain these changes? [6]
3. Suggest one reason for the changes to the Mer de Glace glacier over this time. [2]
